

Steve Henzell, Manager (Select - the Front End Division of WorleyParsons), WorleyParsons, Melbourne

Steve Henzell heads up WorleyParsons' Select team in Melbourne, which specialises in conceptual design and feasibility studies. WorleyParsons is a leading proponent of Advanced Solar Thermal power generation facilities in Australia and elsewhere in the world, with experience in the technology dating back over more than 20 years. He is a chemical engineer by background and has worked in the energy industries for more than 25 years.

In his leading role in feasibility studies, Steve brings breadth of knowledge to the evaluation of all projects including the assessment of solar generated power. While he is not a specific expert in solar thermal power generation, he brings an overview of the feasibility issues with developing a new power generation facility within Australia. Steve has spent considerable time researching and evaluating solar thermal and alternate renewable energy systems in the context of the rapidly changing Australian renewable energy environment.
